OROPHAYRNGEAL AIRWAYS

Rapid and secure airway management, improved patient safety with gastric access to reduce risk of pulmonary aspiration, and fast and accurate ET tube placement with a unique guide system.

Reduced Risk of Aspiration

Integrated suction catheter port for efficient removal of fluids and gastric contents.

Reinforced Bite Guard

Minimising risk of pressure to soft tissues and protects from occlusion if patient bites down, while also reducing the likelihood of dental damage.

Directed Intubation

Accepting a range of ET tube diameters, the guide system directs the tip through the vocal cords.

Epiglottic Flap

Integral fenestrated flap protects from blockage with minimal increase in flow resistance, and elevates the epiglottis for easy, trauma-free ET tube or bronchoscope insertion.

LarySeal

A comprehensive range of Laryngeal Mask Airways that adapt to the contour of the oropharyngeal airway for easy first time insertion success. Each LarySeal model shares common features and are manufactured to give you clinical confidence.

Crush Resistant Tube

Thickness of the main tube wall reduces risk of crushing, while star lumen maintains patency.

Universal Connector

15mm Male connector provides a universal connection.

Secure Seal for Airway Management

Cuff material moulds against the contours of the oropharyngeal area, providing a secure seal.

Colour Coded Pilot Balloon

Easy identification of sizing by colour coded pilot balloons.

Indication of the Cuff Pressure through Pilot Balloon

Thin wall pilot balloon indicates the inflation of the cuff.

Clear View

Deep and open port reduces risk of blockage by epiglottis and unrestricted access.

Rapid and Safe Battery Removal Quick release mechanism in the reinforced

remove batteries and dispose.

Ultra-low profile blade reduces risk of

dental trauma and provides additional

space to manoeuvre the blade for the best

block housing for easy battery removal, minimising pre-use and post-use handling, reducing cross-contamination risk.

Test In-Pack

Reduced Profile

view possible.

Can be easily tested in pack without compromising sterility, reducing risk of cross-contamination.

Bright, White LED Light

2000-lumen LED bulb gives focussed illumination, granting excellent visualisation of the glottic structures.

Colour Coded

BritePro™ Omni reduces risk of cross contamination. Simply open, use,

Blades are colour coded for size verification to easily identify the correct size for the patient. Sizing is also reaffirmed on the handle base.

Watch Online

Watch our BritePro Omni videos on YouTube to see it in action.

BritePro Solo

BritePro Solo consists of a sterile ergonomic handle with pre-fitted batteries, bright LED light, and fibre optic all-metal blade. Simply open when needed, use and dispose.

COMPLETE. STERILE. SINGLE-USE.

Ready when you are.

Performance

Unique textured grip delivers excellent control and feel, while the high intensity white light provides excellent visualisation.

Reduced Handling Before and After Use

Take straight from the pack, use and safely dispose without removing the batteries, reducing risk of cross-contamination between patients and staff.

Interchangeable Blades

Quick and easy exchange of blade type and size without having to open another Solo pack.

Reduced Profile

Reduction in the shoulder and block height lowers the risk of dental trauma and provides additional space to manoeuver the blade to obtain the best view. Typical overall height reduction of 71% in curved blades and up to 25% in straight blades.

BRIGHT, CLEAR & COMPATIBLE

For use with all fibre-optic blades.

BritePro Max

Bright, white LED light delivers a true visualisation of larynx and tissue structures.

Energy Efficient

LED bulb uses less power from the batteries than conventional halogen or krypton bulbs, reducing frequent battery replacement.

Green System Identification

The green band signifies that BritePro Max conforms to EN ISO 7376:2009 and is compatible with all fibre optic blade systems.

Reusable Fibre Optic Standard and Speciality Blades

High grade of fibre-optics provides optimal light transfer without heat, reducing risk of thermal damage and maximising view of the larynx. Made from high quality stainless steel, our blades give clinicians a complete choice for all patient intubation requirements.

Macintosh Blades

Curved design allows the tip to be guided to the epiglottic vallecula for direct visualisation of the glottis whilst holding the tongue to the side for direct vision of intubation.

Miller Blades

The shallow curved tip provides greater control in patients with a larger epiglottis, such as in paediatric patients. Infant and neonatal Miller blades also available with a delivery port to provide supplementary oxygen during laryngoscopy.

Flexible McCoy Type Blades

The Flexible blade has a hinged tip operated by a lever mechanism. This elevates the epiglottis while reducing amount of force required. Shown to improve the view during difficult intubations and in patients wearing cervical collars.

Robertshaw Blades

For neonatal and infant use, Robertshaw blades feature a gentle shallow blade curvature to lift the epiglottis indirectly in a similar way to Macintosh Blades.

Seward Blades

Originally an infant blade for asphyxia neonatorum, also used for paediatric patients.

Wisconsin Blades

For neonatal and infant use for an improved view and greater control of the epiglottis with a subtly wider distal end than a standard Miller Blade.

Reusable Conventional Standard and Speciality Blades

Blades are high quality stainless steel. The light source provides a high level of illumination and can be easily removed. While the distance from bulb to tip protects from accidental burns. Our speciality blades offer a complete choice for all intubation requirements.

Reusable Laryngoscope Handles & Box Sets

In addition to the Fibre Optic and Conventional Reusable Laryngoscope Box Sets which are readily available, Flexicare offers a customisation service so clinicians can choose a combination of handles and blades for a bespoke intubation pack. The handles and blades are protected by the outer casing as well as being securely held in place within designated foam inner compartments.

Handles can be opened at both ends to remove swollen batteries with ease. For further information please contact us to discuss your requirements.

The polyvinyl chloride material is firm enough for easy insertion, yet flexible for easy removal once tube is in situ.

Reduced Patient Trauma

The smooth surface and rounded tip reduces risk of potential damage to soft tissue.

Clearly Graduated Marking

Indicates depth to guide correct placement.

Reduce Risk of Cross Contamination

Provided sterile, the single-use Bougie reduces risk of cross-infection.

Coudé Tip

Facilitates correct placement by providing accurate feel of the tracheal wall C-Rings. The flexibility also makes for easy removal once the Endotracheal Tube is in situ.

Contains an aluminium core and soft touch outer casing.

Range of Flexibility

Can be shaped into the required curvature to suit the intubation need.

Smooth Tip

Reduces risk of damaging soft tissue.

Wide Range of Sizes

Paediatric & adults sizes available, with different lengths and outer diameters suitable for all patient needs.

Single-use

Supplied sterile, reducing risk of cross-contamination.

038-968-033	Bougie / Introducer	3.3mm	10	700mm		10

038-967-150	Stylet - Extra Long	5.0mm	15	700mm	Adult	10

Soft Rounded Distal Tip

Gentle, bevelled tip reduces potential for soft tissue trauma during insertion, with minimal increase in flow resistance.

Distance Markings

Earlier indication of depth during insertion with clear, bold print and check for any possible movement or dislocation of the ET tube during the procedure.

Rapid Inflation Pilot Balloon

Small balloon size, means less air is pushed into cuff, reducing potential tracheal wall necrosis when checking cuff inflation using the "squeeze" test.

Large Murphy's Eye

Keeps airway patent should tip become occluded and large size of hole softens tip, reducing risk of soft tissue trauma.

Kink Resistant

Retains tube patency for patient safety, whilst softening at body temperature to conform to patient's respiratory tract.

Simple Verification

Small and rounded shape of the balloon gives a more responsive and tactile feel to the user for inflation check.

Circumferential Vocal Cord Markers

Double guide lines are clearly seen from all angles, facilitating safe and accurate cuff placement below the vocal cords.

Coloured Inflation Line

For quick identification to differentiate from other tubing.

Reinforced Central Rib

Prevents complete collapse of the pilot balloon, during rapid deflation ensuring line to cuff is always open.

VentiSeal Endotracheal Tubes

ET Tube Holder

Securely retains the position of all sizes of ET Tube.

Jaw Opener

To be used with an ET Tube when the patient has 'Teeth Clench'.

	QTY
ET Tube Holder	10
Jaw Opener	10

AIRWAY MANAGEMENT www.flexicare.com

A comprehensive range of uncuffed endotracheal tubes provide safety and comfort for patients and intubation with total confidence.

Clear Positioning Guides

2.0mm to 5.0mm ID tubes feature a single Depth Guide to identify correct placement. The orientation guide indicates position of the Murphy's Eye and tube tip.

Distance Markers

Distance Markers start at 3cms for safe and accurate placement in the smallest patients.

Vocal Cord Placement Markers

Sizes 5.5mm and above feature the same double line as the VentiSeal tubes, making them clearly visible from all angles, facilitating safe and accurate tube placement.

High Resolution Radiopaque Line

For easy and accurate identification of tube position during x-ray.

Smooth Bevelled Tip

Rounded bevelled tip reduces risk of damage to vocal cords during intubation.

Kink Resistant

Maintains tube patency whilst softening at body temperature to conform to the patient's respiratory tract.

Reduced Risk of Injury

Rounded edge and angled cut of the tip helps reduce the risk of injury during insertion.

NasoSafe

Size Colour Coding

Available in 11 sizes with colour coded swivel grips, that indicates the correct suction catheter size.

Swivel Safety Grip

Safety grip can be rotated through 360° to place the airway in a convenient and comfortable position without blocking the free nostril.

Better Tolerance

Nasopharyngeal airways are better tolerated by awake patients than oropharyngeal airways.

NasoClear

Clear Construction

Providing visual confirmation of any blockages before insertion.

Flared Nasal Opening

Integrated connector for comfortable positioning without obstructing the other nostril, while nostril. Prevents the tube from travelling down the nasal passage, without the need for an additional fixation device, such as a safety pin.

www.flexicare.com — AIRWAY MANAGEMENT

Guedel Airways

An airway adjunct that prevents the tongue from obstructing the airway, whilst an integrated bite block protects from occlusion.

Smooth Bevelled Tip

For easy insertion, minimising the risk of patient trauma.

Individually packaged and single-use. Supplied sterile to reduce risk of cross-infection.

Berman Oropharyngeal Airways

Side channels enable use of suction catheters without obstructing the airway, allowing for additional air flow.

Embossed Size

Size is clearly visible on airway aiding quick and easy verification.

Colour Coded Integrated Bite Block

Prevents patient from occluding the airway by biting down. Colour coded according to BS EN ISO 5364:2016 for ease of indification and catheter size.

Williams Airways

Opening on the distal half of the lingual surface, provides a conduit for fibre-optic guided intubation.

Flexi-Lock Systems

Expandable circuit for greater flexibility within the operating room or for patient transport. The circuit can be expanded to the desired length and curved into specific positions without the need for tying down.

Gas Sampling Options

Absence of a Y-Piece lessens dead space, and when coupled with the lighter circuit weight, torsional forces transmitted to the patient airway device are reduced.

Crush Resistant

Flexible, kink-resistant tubing maintains flow even if twisted through 180°.

An integral monitoring line with machine end gas sampling port, or patient end gas sampling at the elbow meets set-up preferences.

Adaptability

Versatile system is suitable for use in Operating Rooms, Transport Ventilation, MRI Suite, or for patients requiring short term mechanical ventilation in an ICU.

Maintenance of Normothermia

Transfer of heat from expiratory gases through the septal wall adds warmth to the inspiratory gas flow, helping combat the cooling effect of the oxygen supply and anaesthetic agents.

Decrease Environmental Waste

Less plastic material disposal compared to conventional Dual Limb circuit or multiple circuit usage for different therapys.

Choose Your Preferred Setup

Patient End
Gas Sampling Port

Inteliflo® is a single limb anaesthesia circuit with a double lumen tube

divided by a central longitudinal septum. The septal wall running along the tube length reduces compliance, delivering accurate gas volumes.

26 www.flexicare.com — ANAESTHESIA BREATHING SYSTEMS

Mapleson A - Magill and Parallel Lack

This system consists of a reservoir bag close to the fresh gas outlet with the APL valve placed at the patient end (Magill A, or expiratory limb-Parallel Lack). During the expiratory phase, exhaled gases will force the fresh gas back into the circuit and reservoir bag, and escape through the APL valve (scavenging port). The system requires a low flow (0.8-1 times of Minute Volume, approximately 6-8 litres/minute) during spontaneous respiration to prevent rebreathing. Not recommended for intermittent positive pressure ventilation (IPPV).

Mapleson C - (Waters Bag, Bagging System - Adult, Direct and Paediatric and Resuscitation Bag)

Mapleson C has the Reservoir bag positioned very close to the patient and can also be used for manual ventilation during resuscitation. A flow rate of 1.5-2 times of the minute volume is required to avoid rebreathing.

Mapleson D Coaxial Bain

This system is mainly used with ventilated patients. The fresh gas flow is close to the patient and the APL valve is placed away from the patient. The risk of rebreathing in this circuit is high especially in patients who have a short expiratory pause or do not have an expiratory pause (infants). To overcome this problem a high FGF of 2-4 times of the patient's minute volume is required to prevent all rebreathing. In practice some rebreathing is tolerated and in an adult FGF of 6-7 litres/minute will maintain a normal arterial CO₂ tension.

Ventiflow

Coaxial Ventiflow is ideal for low flow anaesthesia in both spontaneously breathing and ventilated patients, and has the flexibility to be used in either open or closed configurations. All are supplied with a spare 22mm male connector for most connection configurations.

The Flexicare range of scented anaesthetic face masks are offered in three aromas: Lemon, Strawberry and Vanilla to help overcome the unpleasant smell of anaesthetic gases.

Inflatable Cushion

The seal can be enhanced by inflating or Colour coded masks to identify the aroma

anatomical contours.

Colour Coding

deflating the cushion to suit the patient's and coloured hooks indicate mask size.

Silicone Reusable Anaesthesia Face Masks

The reusable silicone anaesthesia face masks are fully autoclavable up to 50 times. Textured moulded rim for maximum patient comfort and tight seal, with the transparent face piece for patient monitoring. 22mm and 15mm connectors ensure compatibility with all standard catheter mounts and breathing systems.

Total Flexibility

Available in Standard corrugated, expandable Flexi-Lock or Smoothbore tubing, and a range of diameters and lengths for total flexibility.

Maximum Choice

Sterile or clinically clean, and a wide range of fixed or swivel elbows with or without ports providing every option.

Secure Fitting

22mm F 15mm M end connectors for secure fitting to all Y-Pieces and airway devices.

Swivel Elbow with Double Port Cap and Seal

The upper cap features a port with a seal for the insertion of a fibre optic scope. The airtight seal prevents any loss of pressure from the system, maintaining ventilation unrestricted access for suction catheters. during the procedure.

The lower cap fits with a snap fit and, when open, the port is used for suctioning. The large 9.5mm diameter provides

Either port is easily opened and closed with one hand, meaning the other hand can be used to insert the scope or catheter, making it a quick and easy single person procedure.

www.flexicare.com — ANAESTHESIA BREATHING SYSTEMS 35

Disposable Patient Spirometry Kits for use with enabled GE Carestations® and Carescape® modules.

Lightweight Sensor Tubes

Monitoring line lengths ranging from 2m-6m means a convenient size is available, whatever the breathing system configuration.

Colour Coded Manifolds

For ease of set-up - Blue for sensor tube and White for monitor module.

Gas Sampling Line

Angled connector reduces risk of kinking and possible impingement against other equipment.

Monitoring Line Amalgamation

Reduces clutter, with the ability to separate the gas sampling line should extra reach be required at both the sensor tube or monitor module end.

Compatibility

Flexicare's patient spirometry sets are compatible with all GE and Philips anaesthesia machines that offer a spirometry option. They are compatible with all of Flexicare's range of breathing systems and will monitor anaesthetic and airway gases, lung mechanics (volumes, flows and pressures).

Inhalation of a mixture of oxygen and nitrous oxide provides safe and effective pain relief during childbirth and short, potentially painful procedures An incorporated demand valve is regulated by the patients inspiration pattern allowing gases to be controlled and not lost to the environment, reducing costs and exposure of staff.

Lightweight

Crush-resistance lightweight low resistance corrugated tubing that will maintain flow even when twisted through 180°.

Patient Choice

Nitrous oxide / oygen circuits are available for use with a mouthpiece or mask providing patient choice.

Non-Return Valves

The T-Piece incorporates two non-return valves for gas delivery on demand and to prevent rebreathing of exhaled gases.

ANAESTHESIA BREATHING SYSTEMS | **SODA LIME** ABSORBENT

VentiSorb^{*}

Non-uniform granules maximise CO₂ filtration without restricting gas flow.

Colour Change Indicator

VentiSorb is available in two different colour options, giving clear visual indications of the level of active soda lime remaining available for CO_2 absorption. both conforming to International Standards. When exhausted, VentiSorb will change colour, indicating that the soda lime needs to be replaced. This should be used alongside CO_2 monitoring to confirm compound exhaustion.

High Hardness, Low Dust

Ventisorb is resistant to dust formation in comparison to other granular soda lime absorbents.

- Increased Moisture Output - Minimal Anaesthetic Agent Degradation - Improved Heat Retention

Specification	US Pharmacopeia

BUBBLE CPAP SYSTEM	•
INFANT NASAL CPAP	

Simple to operate, with intuitive controls and easy to select functions, the FL-9000 Respiratory Humidifier offers a complete solution to provide warmed and humidified inspired respiratory gases to ventilated patients and those receiving respiratory support.

Misconnection Prevention

Easy-connect heated wire and temperature probe sockets of different design ensure correct connection

Variety of Circuit Options

Suitable for Invasive or Non-Invasive Ventilation, and Heated or Non-Heated Wire Breathing Systems.

Multi-Function Display

Clear easy-to-read LED Display with the option to check Airway, Chamber or Heater Plate Temperature, or hold on a custom setting.

Positive Connection

Heater Plate with spring loaded locking mechanism for secure placement of humidification chamber.

Alarm Indications

Clear, colour coded visual and audible alarms notify user of set-up errors, accidental disconnection during use or delivered temperatures outside the set parameters.

Watch Online

Our YouTube channel has a suite of helpful videos to demonstrate setup, cleaning and use of the FL-9000.

DOUBLE VALVE SYSTEM

Twice the safety for your patients.

Double Valve Auto-Fill Humidification Chamber is part of a complete system to actively warm and humidify inspired respiratory gases delivered to ventilated patients and those receiving respiratory support.

Improved Responsiveness

Lower water capacity for rapid achievement of optimum operating temperature and minimal temperature fluctuations.

Highly Compatible

22mm connectors for compatibility with a wide range of ventilator circuits.

Valves open to allow the chamber to fill.

Gas Flow Diverters

Flow is routed through the chamber to maximise efficiency of warming and humidification of the gases.

Clear Construction

Transparent construction, red fill indicator and clear markings for quick and easy monitoring of water level.

Primary Valve Valve closes once level is reached.

Heat Transfer

Flat base for complete contact with the heater plate for efficient, rapid and responsive water heating.

Overfill Protection

Primary and a secondary seals to regulate the flow of water and provide protection against overfilling.

Secondary Valve

Valve prevents any further water entry.

VENTILATOR BREATHING SYSTEMS www.flexicare.com

Effective Moisture Management

The VentiMyst® technology reduces the build up of rain-out.

Efficient Temperature Transfer

Helps prevent gas temperature loss and surface cold spots, minimising rain-out.

Clinical Confidence

Reduced need to open or break the circuit with associated loss of PEEP and de-recruitment of the lungs.2

Low Compliance Tubing

Accurate delivery of gas volumes and ventilation pressures to the patient.

Sterile Packed

All VentiMyst Heated Wire Breathing Systems are supplied sterile for superior patient safety.

Reduced Risk

Reduced risk of accidental drainage of rain-out into the patient's airway.3

VentiMyst® Moisture Management Technology

Reduced build-up of rain-out compared to standard corrugated heated wire limbs.

Full range of low compliance Single and Dual Heated Wire ventilator breathing systems deliver respiratory gas at optimal temperature and humidity to the patients requiring mechanical respiratory support.

Double Coiled Heated Wires

Sterile Packed

All heated limbs feature a double coiled heated wire configuration to provide consistent warming of gas flow and limb wall to minimise possible rain-out.

All Heated Wire Breathing Systems are supplied sterile for superior patient safety.

Soft Contoured Nasal Prongs

Comfortable and well tolerated silicone prongs aid patient compliance.

Quick and Secure Setup Wings on the swivel con-

Wings on the swivel connector for easy connection and disconnection.

MRI Safe

Fully metal-free making Veoflo safe to use in the MRI suite.

Adjustable Tube Placement

Detachable smoothbore tube and plug so the tube can be comfortably placed on either side.

Split Headstrap

Easy to adjust wide elastic split strap provides a secure fit and increased patient comfort.

Secure Connections

Adjustable Tube Holder reduces drag and works in tandem with the lanyard and crocodile clip to provide extra support.

TRACHEOSTOMY INTERFACE

The Veoflo Tracheostomy Interface delivers high oxygen concentrations to spontaneously breathing tracheostomised patients during weaning from controlled ventilation.

VEOFLO ADAPTER Available as an individual

¹ Wettstein RB, Shelledy DC, Peters JI. Delivered Oxygen Concentrations using low-flow and high-flow nasal cannulas. Respir Care 2005;50 (5): 604-9. ² Miller, Kenneth. High Flow Oxygen: Does It Make a Difference? RT Magazine. Sept 2013.

veoflo

Veoflo® High Flow Nasal Cannula is the comfortable

choice for effective High Flow Oxygen Therapy

Veoflo High Flow Nasal Cannula delivers warmed and humidified gas, providing versatility to meet the patient's

For patients with mild to moderate respiratory distress

syndrome, HFOT can improve oxygenation and decrease the

work of breathing without the need for non-invasive ventilation

or intubation in selected patient populations.^{1,2}

(HFOT).

changing condition.

High Flow Nasal Cannula (HFNC) offer many advantages when used in conjunction with humidification, including accurate delivery of high FiO₂ and optimised mucociliary clearance, while increasing alveoli recruitment in a technique that offers improved patient comfort and compliance.

Studies have shown that High Flow Nasal Therapy is able to deliver a modest amount of positive airway pressure and may provide a bridge from NIV to conventional O_2 delivery devices¹.

Soft Touch Tubing

Gentle on the ears and face, minimising friction and pressure on delicate tissues.

Sizing Guide

Use the guide to select the appropriate cannula size, ensuring best fit and minimising potential waste.

Compatibility

Adaptor provides a secure connection to both 22mm and 15mm respiratory limbs.

Adjustable Slider

Secure and comfortable fitting without the need for a head or neck strap.

Secured Oxygen Delivery

Star lumen tubing ensures the flow of oxygen is maintained even if the tube becomes kinked.

All Patient Groups

Individual colour-coded range of cannula sizes provides an excellent match to needs from premature babies through to adults.

HIGH FLOW OXYGEN THERAPY | VENTIMASK

Ventimask®

Ventimask is an alternative for patients who are unsuitable for a High Flow Nasal Cannula (HFNC), such as those with blocked nasal passages or following trauma/surgery to the nasopharanyx.

Attaching Ventimask to a humidified Single Limb Heated Wire Breathing System, and either an oxygen blender or Flexicare's Humidity Adaptor and Venturi barrel, humidified HFOT using a face mask can easily be set up to meet the patient's needs.

037-10-007	Ventimask without Venturi Barrel	50
037-10-004	Ventimask with 40% Red Venturi Barrel	50
037-10-005	Ventimask with 60% Green Venturi Barrel	50
037-10-000	Ventimask High O ₂ Concentration Set with 40% & 60% Venturi Barrels	50

Humidity Adaptor

When connected to a humidified Single Limb Heated Wire Breathing System, humidified air is entrained by the Venturi barrel. Use of a humidity adaptor is the most accurate method of giving fixed concentration humidified oxygen to the patient.

Extensive range of Infant Nasal CPAP sizes for an optimal fit, combining excellent functionality with the softest materials for gentle and effective care.

Atraumatic

Anatomically curved soft silicone cannula with depth markings in a range of 7 sizes for a secure and leak-free fit to maintain CPAP and minimise the risk of tissue damage.

Secure Positioning

Securing straps on the soft knitted cap help position the circuit tubing, reducing the risk of cannula movement.

Sterile & DEHP Free

Infant Nasal CPAP sets are sterile-packed* to the highest standard to avoid unnecessary risks in these vulnerable patients.

Suitable from Neonatal to Infant

Cannula size range starts at 00, suitable for very low birth weights of under 500g, up to Size 5 for infants.

Secure Connection

Tapered universal connector fits securely to most commonly available heated breathing systems.

60 www.flexicare.c

The cap-less, self-sealing valve automatically prevents possible leaks or air entrainment around a loose or poorly fitted cap.

Colour Coded Valve

Distinctive orange colour coding of the LuerSafe valve and LuerSafe monitoring line clearly indicates the correct corresponding connectors.

Unique Design Luer Port

LuerSafe eliminates the risk of misconnection to standard luer connectors, such as IV tubing, ensuring the connection is to the monitoring line only.

Check the LuerSafe is securely locked and verify the capnography trace.

To remove, unscrew the monitoring line and the valve will self-seal.

MAXIMUM PROTECTION

Superior Filtration.

Hepashield pleated hydrophobic bacterial/viral mechanical filters minimise flow resistance and maximise surface area for superior filtration efficiency.

Secure Luer Lock

Push-fit tethered luer lock cap, secured with a strap reducing the risk of misplacement or loss.

Reduced Drag

Light weight construction reduces drag on the breathing system and airway.

Rounded Edges

Smooth contours prevent pressure marks on the patient.

Barr-Vent bacterial/viral filter is used for filtration of ventilation gases with bidirectional performance of the filter so both patient and machine are protected against microbial contamination.

Barr-Vent Filters are respiratory filters that protect patients and clinicians against bacterial and viral infections. The electrostatically enhanced filter material effectively forms a barrier, reducing the risk of cross-contamination without compromising the resistance to the flow of air.

BREATHING FILTERS

Give your patients the boost they need.

Located close to the patient, the innovative HME Booster is a unique solution to provide heat and humidity to the patient without relying on conventional active humidification systems.

With HME Booster technology, extra heat and moisture can be provided to ventilated patients when needed.

Multi-Use

Durable and reusable heater is available with different power configurations for multiple regions.

High Performance Delivery

The HME Booster delivers not only heat and moisture directly to the patient with every inspired breath, but during exhalation it also increases the performance of the HME for the next respiratory cycle.

Optimal Combination

The system consists of a high-performance HME filter with heating element and a water source adapter. The heating process causes evaporation, which warms and humidifies the air. The extra heat and moisture in combination with the HME provide excellent humidification levels.

Heat Moisture Exchanger (HME) for spontaneously breathing patients fitted with a tracheostomy tube.

Self-sealing Suction Port & Integral Cough Vent

The airway can be cleared by inserting a suction catheter through the integrated self-sealing suction port. The port also acts as a vent that can open during vigorous coughing to allow thick mucosal secretions to be expelled, avoiding blocking of the airway.

Swivel Oxygen Connector

Supplementary oxygen can be provided by attachment to the ThermoTrach swivel oxygen connector which can be angled to the most convenient and comfortable position, reducing the risk of disconnection, kinking and drag against the patient.

Corrugated Paper Media

The white colour HME media makes it easy for carers to see any contamination of the media and change before a problem arises.

Clear Construction

Clear housing permits visual examination for potential occlusion or accumulation of secretions which could block the airway.

Humidified Oxygen

The oxygen flows through the HME to be warmed and humidified before reaching the patient.

Heat & Moisture Exchange Process:

- ← SUPPLEMENT OXYGEN
- **←** WARM HUMIDIFIED AIR
- ← EXPIRED/AMBIENT AIR

Climatrach HME is a heat and moisture exchanger that takes over the function of the upper airways in patients with a tracheostomy.

Patient Comfort

Effectively warms and humidifies the inhaled air by the HME medium. Unique design combines excellent performance with a lightweight construction for extra patient comfort.

Safety Valve

The optional safety valve opens when the internal pressure temporarily becomes too high and closes when the pressure reaches normal value again.

Pulmonary Function Test Filter

Protecting both patient and pulmonary function testing equipment, the PFT Filter reduces the risk of cross-contamination between patients and equipment with minimal resistance for accurate test results. Reducing the risk of transmitting respiratory pathogens with the use of the Flexicare PFT Filter during normal breathing or forced vital capacity testing meets the American Thoracic Society recommendations for resistance in PFT equipment.

Clinically proven that "only the Ventimask is able to provide a fixed and predictable oxygen concentration under conditions of the changing ventilatory patterns found in clinical practice." 1 Ventimask is the accepted standard for controlled oxygen therapy for exact oxygen concentration delivery, optimum clinical performance and greater patient acceptability.

Large Capacity

Large 280ml capacity acts as an oxygen reservoir and maximises accuracy. Also reduces any feeling of claustrophobia, improving therapy compliance.

Horizontal Gas Flow

Minimises irritation and drying of the eyes.

Exhalation Vents

The number and position of the vents enhance CO_2 washout and prevent pressure build-up in the mask.

Soft and Flexible

The masks seals comfortably to the face without pressure points.

76 www.flexicare.com — OXYGEN & AEROSOL THERAPY

Soft and pliable Medium Concentration mask that moulds easily to the patient's face, with a feathered-edge rim for excellent fit and seal to provide maximum comfort and efficacy.

Patient Comfort

Knitted latex free strap maintains its width when stretched and reduces pressure on patients' skin, helping protect from pressure sores.

Nose Bridge

Reinforced nose bridge holds the mask shape without the need for a metal nose clip, preventing accidental injury and making the mask fully MRI compatible. Adult masks are available with the option of a metal nose clip.

Strap Option

The Adult mask has the option of earloops, ideal for patients with restricted head movement or find the strap behind the head uncomfortable.

Clear Observation of Face Colour and Vital Signs

Clear and colourless mask for quick and easy assessment of potential cyanosis.

Swivel Connector

The connector can be rotated to the most convenient and comfortable position, accommodating for patient movement and oxygen supply from either side.

Stepped Oxygen Inlet

Quick, easy and secure connection to oxygen tubing.

Flexicare's Soft Touch Nasal Cannula tubing is flexible and gentle on the ears and face, minimising friction and pressure on delicate tissues, reducing the risk of tissue damage and pressure ulcers.

Better Care with Reduced Costs

Soft Touch tubing minimises stresses on the ear and facial tissue, reducing the potential for skin breakdown and associated costs. Soft Touch tubing avoids the need for uncomfortable, bulky foam ear guards or cushions which can retain moisture and potentially become a reservoir for infection.

- Improved Patient Compliance
- Less Bulky than Ear Guards
- Avoids Additional Treatment Costs
- Full Range of Sizes and Options

Guidelines¹⁻⁷ require EtCO₂ monitoring of all moderately or deeply sedated patients, for patients being recovered from anaesthesia or moderate or deep sedation, and during CPR to monitor ET tube placement, efficacy of chest compressions and early indication of return of spontaneous circulation. Dual Masks and Nasal Cannula simultaneously deliver supplementary oxygen and enable EtCO, monitoring when using a sidestream or Microstream[™] capnometer.

Dual Mask

Dual Mask provides continual monitoring of carbon dioxide exhaled from both mouth and nose whilst delivering supplementary oxygen. Pre-fitted oxygen and sampling lines makes set-up quick and easy.

Easy Fit with Good Seal

The soft, pliable mask moulds easily to the patient's face, with a feathered-edge rim provides maximum comfort

Microstream[™] Compatibility

Dual products with a microstream type luer connector filter are compatible with capnography monitors and multiparameter monitors equipped with Microstream technology.

Independently Tested

Dual Mask has been proven to be the most efficient in sampling end tidal CO₃ in an independent comparative study8 in a simulated patient.

Comfort and Security

Attached to the swivel connector, the oxygen tubing and monitoring line are lightly bonded together, but can be separated to reach the flow meter and capnometer, minimising clutter around the patient.

Dual Cannula

luer connector filter are compatible with capnography monitors and multiparameter monitors equipped with Microstream technology.

Microstream Compatibility

Dual products with a microstream type

Patient Comfort

Oxygen is delivered to both nostrils via the lower ports and EtCO₃

is sampled from both nostrils for sidestream or Microstream[™] CO₃ monitoring through the upper prongs. During exhalation, oxygen flow is

diverted away for an accurate and reliable capnography trace.

Soft Touch tubing reduces friction for increased comfort over the ears and across the face.

OXYGEN & AEROSOL THERAPY

Non-Rebreathing Mask

Delivering a high concentration of oxygen to spontaneously breathing patents, even with irregular breathing patterns and tidal volumes.

Reduced Risk of Patient Trauma

Elasticated earloop option on the adult mask eliminates the need for the patient's head to be moved to fit the mask, reducing risk of further injury.

Secured Oxygen Delivery

Star Lumen Tubing maintains oxygen flow, even if the tube is kinked.

Ease and Speed of Fitting

Mask is fitted quickly and easily with the swivel connector rotated to suit the patient's position.

Reduced Risk of Bag Occlusion

Castellations on the swivel connector ensures flow of oxygen from bag to patient is uninterrupted.

OXYGEN THERAPY | POST-OPERATIVE

FCOT is a complete solution for delivery of 40% oxygen to post-op adult and paediatric patients with a laryngeal mask, through recovery to the ward.

Visual Confirmation of Spontaneous Breathing

Condensation on the T-Piece and Indicator Bag inflation/ deflation cycle clearly shows the patient's breathing pattern.

No Rebreathing or Oxygen Dilution

The high flow of oxygen enriched air inflates the Indicator Bag and flushes expired gases out through the vents, eliminating rebreathing. During inspiration the Indicator Bag acts as a reservoir, preventing dilution of the inhaled gas by ambient air.

Cost Effective

Complete kit with 40% Venturi, T-Piece with Indicator Bag, Mask and Star Lumen Oxygen Tubing provides a convenient and cost effective solution.

Through Recovery to Ward

When the laryngeal mask is removed, simply replace the T-Piece with the Aerosol Mask included in the kit for continued oxygen therapy during transfer back to the ward.

MaxiNeb®

MaxiNeb nebulisers have a low Dead Volume, short Nebulising Time, optimal MMAD and high percentage of aerosol mass in the Respirable Range.

MaxiNeb Nebuliser
MaxiNeb is a high output nebuliser which
delivers medication quickly and efficiently.

MaxiNeb 90

Features all the benefits of MaxiNeb, but functions at angles up to 90°, making MaxiNeb 90 ideal for recumbent patients.

Patient Choice

Attaches to either an aerosol mask, mouth piece or T-Piece, for a wide choice of delivery options.

Anti-Spill

Easy 1/4 turn cap creates a secure leak-proof seal and the wide tripod legs keeps MaxiNeb stable and upright, even on uneven surfaces.

Clear Chamber

Graduations aid drug dilution and monitoring the nebulisation process through to completion.

for both hospital and home.

The Maxineb Compressor is a simple and convenient nebuliser system

Quiet Operation
Low noise output, minimising ambient
noise level and reducing irritation to the
user.

Compact and Protable

Light weight with an integrated handle for easy carriage. Requires minimal space for storage.

Positive On / Off Switch

The rocker switch allows patients with reduced dexterity to easily operate the compressor.

Easy Change Air Filter

The condition of the filter is easily seen without removal, and the filter cassette is simply exchanged when required.

Bubble Humidifier

Recommended when oxygen is delivered in excess of 4 l/min through a Nasal Cannula.

Increased Humidification

The fine diffuser at the inlet tube end produces very small gas bubbles that maximise the surface area, providing increased humidification with a low noise level, reducing patient disruption.

Safety Pressure Relief Valve

Pressure relief valve automatically opens at 6psi or 4psi should the outlet line become occluded.

Recessed Connector and Screw Cap

Protects the connector from accidental damage or breakage.

PVC Nipple Diffuser

For home use, the PVC nipple diffuser extends the life of the humidifier and minimises risk of blockage.

FIRST AID

Ergonomic, single-use Manual Resuscitators with higher levels of Oxygen delivery and pre-fitted components in quick-to-open packaging, provide fast effective care, even in the most difficult situations.

Grip & Control

Textured surface and optional strap gives grip and control of the ambidextrous bag, even when wearing gloves and in wet conditions.

Optional Strap

Facilitating single handed bag use, the strap on the adult bag frees the other hand to secure the mask or airway device. Double handed compression remains possible if required.

Immediate, Uninterrupted Ventilation

Quick-to-open packaging and pre-fitted mask minimise set up time. Additional devices, such as adjustable PEEP valve or Manometer, are fitted without removing the Resuscitator from the patient.

Clear Valve Assembly

Unrestricted view of correct valve function, and reduced bulk so the user can verify mask or airway position and observe the patient.

Non-Tangle Oxygen Tubing

Star lumen Oxygen tubing maintains gas flow even if kinked or crushed. Permanently bonded to avoid accidental disconnection.

Lightweight Construction

Low resistance valves and fast recoil non-PVC bag reduce user fatigue, even during lengthy ventilations.

Colour Coded Pressure Relief Valve

Located centrally, the Pressure Relief Valve can be operated by either hand and the setting is visible from both sides and above.

Tamper-evident Packaging

Sealed in a clear carry bag for convenient storage. Tear-off strip assures contents are uncontaminated. Resealable after use for safe transport and disposal of contaminated items.

Double Swivel Patient-End Connector

The Valve Assembly rotates 360° in two axes for an effective mask seal and bag position, whatever the approach angle.

Textured Reservoir Bag

The non-stick textured inner surface ensures complete inflation and correct bag function.

CO₂ Monitoring Port

Located close to the patient airway for a maximum capnography trace accuracy and reliability. The capless self-sealing port eliminates gas leak risk when not in use.

MDI Port

Angled MDI port directs medication into patient airway, maximising effectiveness and reducing waste.

Optional Manometer

Available in-pack or as a separate item, the single-use manometer gives a breath-by-breath read-out of delivered pressures.

Optional Adjustable PEEP Valve

Adjustable from 5 - 20cmH₂O, the PEEP valve fits in place of deflector cap without the need to the remove mask or interrupt ventilation.

www.flexicare.com — RESUSCITATION

The Reusable Resus Bag is manufactured from high quality materials that can be autoclaved up to 50 cycles. The range available, design and performance characteristics mirrors those of the Single-Use, with:

- Higher levels of oxygen delivery
- Optional hand strap on the Adult Bags for complete control
- Textured surface for a reliable grip.

CapnoCare™ Capnography Connector

ERC 2015 Resuscitation and other Guidelines stipulate the use of capnography during in-hospital or pre-hospital CPR. Monitoring is made possible by positioning CapnoCare between the Resuscitator and the airway device.

RESUSCITATION

Lightweight and durable NeoPIP™ Infant Resuscitator provides controlled and accurate resuscitation and ventilation of newborns, neonates and infants up to 10kg.

Colour-coded dial clearly indicates the safe

pressure levels during set-up and use.

Colour Coded

Precise Pressures

Adjustable maximum pressure relief (popoff) valve and Peak Inspiratory Pressure (PIP) controls quickly and safely set the required levels.

Large Manometer

Large easy-to-read dial aids set-up and clearly shows delivered pressures during use.

Secure Connection

Break-resistant metal gas inlet connects securely to standard oxygen tubing.

Adjustable Controls

An adjustable maximum pressure relief (pop-off) valve and Peak Inspiratory Pressure (PIP) controls to quickly and safely set the required levels.

Accurate Delivery

Used with a blender and flow meter, NeoPIP delivers accurate oxygen concentrations between 21% and 100%, even at flow rates as low as 4LPM.

Durable & Dependable

High quality, impact resistant aluminium body protects from accidental damage.

Universal Connection

Standard 15mm Female Connector accepts standard Infant Resuscitator T-Piece Circuits without the need for an adapter.

Universal Mounting Bracket

NeoPIP can be mounted on vertical or horizontal Vacuum Brackets, IV Poles, or DIN or Dovetail Rail Systems.

	set the required levels.	QTY	
NF-100	NeoPIP Infant Resuscitator	1	
NF-101	NeoPIP Universal Mounting Bracket	1	

Suitable for use in Delivery Suites, Labour Wards, NICU, SCBU and Infant Transport. The universal connector fits seamlessly with all popular resuscitation units without the need for an adapter.

Easy-to-adjust PEEP control valve rotates with precision for exact pressure setting and remains constant even during prolonged use.

Accurate Reliable Delivery

Low compliance tubing with shallow corrugations for minimal flow resistance and accurate pressure delivery.

Connectivity

T-Piece connects directly to your choice of mask, endotracheal tube or laryngeal mask airway.

Coloured Ergonomic T-Piece

Blue T-Piece colouring makes the circuit easily visible at the cot side, and the ergonomic shape improves comfort and reduces hand fatigue during prolonged

Controlled Oxygenation

Finger/thumb port to control inspiration and expiration, by placing the thumb/ finger over the port to deliver 21% - 100% or free-flow oxygen.

Flexible Circuit

Lightweight, flexible, crush resistant tubing maintains flow even if twisted through

Infant Resuscitation Face Masks

Resuscitation masks are completely disposable to reduce cross contamination risks and associated reprocessing costs. They are made with a soft, clear material constructed for better patient visualisation and a secure, low pressure seal.

94 www.flexicare.com — RESUSCITATION

FIRST AID | **POCKET RESUSCITATION MASK**

Durable Carry Case

Protects the mask until required - easy open release catch to minimise any delay.

Non-return Valve

body fluids reaching the user, but allows exhaled breath to escape

BVM Compatible

Standard connector for fitting to a Manual Resuscitator if required.

Universal

One size for Adults, Children and Infants.

Oxygen Port with Cap

Port for delivery of supplemental oxygen. Avoids the need to change mask during transportation.

Pre-filled Cushion

One-way valve prevents vomit or other Pre-filled for immediate use, the soft mask cushion has a valve to adjust the seal if required.

Integrated Bacterial / Viral Filter

Protects both patient and user from crosscontamination.

010-999 Pocket Resuscitation First Aid Mask

SUCTION

SUCTION CATHETERS	
SUCTION TUBING	
CTEDILE CLICTION VANIVALIEDS	

Sterile Suction Catheters

Choice of Standard or with Vacuum Control. Ideal for Oral, Tracheal or Endobronchial suctioning.

Smooth Clear Main Tube

through all types of endotracheal and tracheostomy tubes.

Soft Tip

Smooth outer surface for easy insertion
Soft rounded tip and smooth edges to the eyes reduces risk of injury.

Vacuum Control

Fingertip port gives the user control over the vacuum level.

Double Sided Eyes

Eyes positioned to help prevent blockages.

STERILE STANDARD	STERILE WITH VACUUM CONTROL		LENGTH	Fr	OUTER DIAMETER MM	COLOUR	QTY

Suction Tubing

Wide range of internal diameters (ID) from 5mm to 7mm and lengths from 2m to 30m rolls.

Peel Pouch Sterile Packing

Sterile double wrapped with a non-stick inner bag and easy to open outer peel pouch.

Clear Collapse Resistant Tubing

Strong walls prevents tube from collapse under high negative pressure.

Spare Male-Male Connector

All sterile tubes are supplied with a spare Male-Male connector for connection to Female connectors, or to connect two tubes if extended length is required.

Universal Female Connector

Ribbed elastomeric connectors for secure connection to adaptors and catheters. Connectors are colour coded for ID size.

Suction Bubble Tubing

Available in 5mm or 7mm ID with 3.5m bubble repeat. Supplied as a 30m long coil in a convenient dispensing box.

VACUUM CONTROL

Complete control at your fingertips.

Effective suction without aspiration of surrounding tissue, and a choice of with or without fingertip vacuum control. Transparent, with a smooth inner lumen for uninterrupted suctioning and rapid passage of material.

Continuous Suction

The lateral eyes positioned near the tip for continuous and easy suctioning.

Optional Vacuum Fingertip Control

Port at the distal end of the handle gives fingertip / thumb control over the vacuum level.

Occlusion Discernibility

Blockages or obstruction are easily seen through the transparent tube. The smooth inner lumen helps maintain the level of suction.

FLEXICARE | **PRODUCTS**

FL9000-02	Respiratory Humidifier Dual Heated Wire Humidifier Adapter Lead
FL9000-03	Respiratory Humidifier Temperature Probe Lead 1.5m
FL9000THA	Respiratory Humidifier Heater - 230V 2 Pin Plug
HF55	HF55 Bacterial Viral HMEF
HF55-FT15	HF55 HMEF with Flex-Lock Straight Catheter Mount 15F-22F
HP5104-01	Humidity Adaptor
NF-023	Disposable Skin Temperature Probes
NF-024	Reusable Skin Temperature Probes
NF-034	Suction Tubing 0.5m (18")
NF-055-10	Infant Resuscitator T-Piece Catheter Access Adapter
NF-056	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") Oxygen Line 2.1m (82") Catheter Access Adapter
NF-100	NeoPIP Infant Resuscitator
NF-101	NeoPIP Infant Resuscitator Universal Mounting Bracket
NF-150	Infant Resuscitator T-Piece Circuit 1.8m (70") with Adjustable PEEP
NF-155	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") Oxygen Line 2.1m (82") Round Masks Sizes 0 + 1
NF-155-NT	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") with Round Masks Sizes 0 + 1
NF-156	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") Oxygen Line 2.1m (82") Anatomical Masks 0 + 1
NF-156-NT	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") with Anatomical Masks Sizes 0 + 1
NF-158-0	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") Oxygen Line 2.1m (82") and Round Mask Size 0
NF-158-1	Infant Resuscitation Kit. T-Piece Circuit 1.8m (70") Oxygen Line 2.1m (82") and Round Mask Size 1
NF-160-10	Resuscitation Face Mask Single Use Round Silicone Neonatal Size 0
NF-161-10	Resuscitation Face Mask Single Use Round Silicone Infant Size 1
NF-170-10	Resuscitation Face Mask Single Use Anatomical with Pre-Inflated Cushion Neonatal Size 0
NF-171-10	Resuscitation Face Mask Single Use Anatomical with Pre-Inflated Cushion Infant Size 1
